What is Lean?
Lean is the application of continuous improvement tools and methodologies to reduce any of the “8 wastes” and wasteful activities in any process.

What are the 8 Wastes?
1. Defects/scrap
Creating defective product means wasting time/money to do it over.

2. Overprocessing
Resources used to add features beyond what the customer needs could be saved.

3. Waiting
This is wasted available time caused by process steps taking longer than expected.

4. New Ideas/Unused Knowledge
What happens if only one person knows how to use a process but they’re absent?

5. Transportation
Time spent traveling long distances to obtain components can be saved.

6. Inventory
Excess inventory takes up valuable space and could become obsolete before it’s ever used.

7. Motion
Valuable time is wasted when moving from station to station to complete a process.

8. Excess production
When producing more than is necessary, inventory builds up and may never be used.

The 8 Wastes can be remembered with the acronym DOWNTIME (see above)!

How does Lean Blitz do this?
1. Initial Evaluation
Before beginning any journey, you must first recognize where you are initially. We’ll look at organizational cost breakdowns (where is most money spent) and revenue streams (where we obtain revenue).

2. Identify Key Processes
Every organization has many processes, but the ones that should receive the focus are the ones that drive bottom line results the greatest.

3. Lay Out Current State of Processes
We “map” the current state of those key processes, determine where we SHOULD be, and identify the best opportunities for waste reduction and value creation.

4. Create Project List and Develop Teams
With senior managers, we’ll create the priority of projects and assign team members.

5. Apply Lean tools
We’ll use some of the Lean tools (shown above) to eliminate waste and add productivity and value!

Here are examples of projects completed using Lean methodologies:

- Developed implementation plan for streamlining business management systems for series of co-owned minor league baseball teams
- Created proposal to improve a major league team’s season ticket sales by over 10% through optimized ticket package portfolio and industries for sales teams to target with season ticket portfolio
- Reduced ticketing software training time by 50% through creation of standardized training program
- Applied time studies and equipment reliability improvements to increase uptime by 12%
- Used production scheduling analysis to streamline operations and cut product manufacturing time by 50%

What can Lean Blitz do for you?

Chad Walters, Lean Consultant

Chad Walters has over eight years of project management and process improvement experience. He is a Certified Six Sigma Black Belt and Six Sigma Green Belt through the American Society for Quality and received his MBA from the Kelley School of Business at Indiana University.
